Fatorda – Margao Goa

Dated :- 19/11/2019

Title of the Project : Supplying of water from salaulim water supply project to left out areas in Sanguem Constituency in Sanguem Taluka.

- Supplying of water from Shirvoi MBR to Neturlim.

Date of Proposal :- 19/11/2019

PROJECT DETAILS

ANNEXURE – I

At present, part of the Sanguem Taluka is supplied drinking water through Salaulim water treatment plant and around 42 rural water supply schemes are in operation in most of the Panchayat areas. The consumers depending on RWSS are demanding the drinking water through Salaulim project. During summer, the sources of RWSS get depleted and there is acute shortage of water and water is being supplied through tankers. Hence laying of pipeline from Sirvoi MBR to Neturlim through 100MLD WTP at Salaulim is considered.

The source of water for these areas is by open well, tube well and springs, but yield of the same gets reduced during summer and the demand of water is increased due to increase of population and the other demand.

To meet the present and future growing demand of population, it is necessary to lay the pipeline from Sirvoi MBR to Neturlim with 2 Nos. GLR of 800m3 capacity at Sulcorna and Neturlim. On commissioning of the same, the enroute villages from VP Malkarnem, villages Cavrem, Pirla, Maina, Sulcorna, Cazur, Mangal, etc., and VP Netravlim can be supplied with water from Salaulim Water Supply Project.
