

## Brief Note for RCC open Inlet Channel

Raw water from Balsamand Sub minor is required to fill up the storage Tanks at Satroad Water Works, Hisar for which RCC open inlet Channel is required to be constructed along N.H. 10 in a length of 850 mt. to meet on the requirement of drinking water for public of Hisar Town. There is no other alternate/location for construction of Inlet Raw Water carrier Channel. Hence, the construction of RCC open Inlet-Channel is justified along this alignment.
