

### JUSTIFICATION OF THE PROPOSAL

The Korsini-I L.I. scheme is proposed on the Right bank of Pranahitha River near Korsini village in Koutala mandal of Adilabad district to create irrigation potential of 3995 acres of ayacut of Korsini, Gangapur, Ravindra Nagar and Burepally villages. The proposal of the Lift Irrigation scheme is to draw water from the Intake well constructed at the shore of the river into the Jack well cum Pump house through gravity from where water will be pumped through 2 pressure mains: Pressure main-A & Pressure main-B to 2 elevated locations in the proposed ayacut such that water delivered from these elevated locations flows under gravity to create irrigation potential to the 3995 acres of proposed ayacut. The elevated location at the end of Pressure main-B is crossing through forest land. There is no other alternative route to reach the elevated location with crossing the forest land. Any delivery point selected other than the above located delivery point will not be able to irrigate the proposed ayacut under gravity. 1164 beneficiaries of 4 villages will be able to cultivate their ayacut of 3995 acres under the proposed lift irrigation scheme. The scheme will create agricultural production in 3995 acres, Employment generation, improvement in the living standards of farmers of 4 villages, fulfilment of basic community needs.

Hence the proposal is justified for which the forest clearance is required.
