

### Justification for locating the project in forest land

At the time of survey of the road Jainti Pipli Motor Road to Silta Chapar, our agency keep this point in the mind that the deforestation must be minimum. Oak trees and other important vegetation falling in the alignment is also less. if we choose Alternate alignment then affected vegetation like baaz trees (*Quercus leucotrichophora*) and wild life is more .In alternate alignment, the ground water table is high due to more vegetation which May reduces the stability of road. And length of Road and Hair pin Bends become more in alternate alignment In our finalized alignment, the density of forest is minimum so our demand of forest land for this project is legal. If we choose other alignment then we will go in reserve forest land and this will also not be economic from engineering point of view.
