NOTES

Heights and Contours have not been observed. A spot height, 's', represents the approximate height, in metres, between the top and bottom of a steep slope. The height, 'h', in this case usually comes from July to December. All measurements were taken under the best of the available conditions. Unmetalled roads, against which there is no remark and most of the cart tracks are parallel to the stream. The stream on the map is irregularly distributed and the variation given may differ largely from the actual one.
