

NAME OF THE PROJECT:

132KV DCDS VISHRAMPUR TO KAUSHALPUR (RAMANUJNAGAR) TRANSMISSION LINE

The proposal for construction of 132kv DCDS transmission line from 132/33kv substation Vishrampur to Kaushalpur (Ramanujnagar) is approved by honourable state electricity regulatory committee in respect of providing uninterrupted & better quality electricity supply to the end user. This project will fulfill the electrification of the railway track being laid for the evacuation of the coal from the coal mines area.

This project will overcome the drawbacks of the road transport at present used for the coal evacuation. After electrification of railway track this may further utilised by railways for ferrying passenger trains as well in coming future.

Since the proposed land is best located for the incoming and outgoing of vishrampur-kaushalpur (Ramanujnagar) with proper road connectivity and for construction of line the forest land in the route of transmission line cannot be avoided. During survey the route of transmission line has been finalized by considering minimum involvement of forest and less number of tree felling.
