Proposed OFC line: _____

REFERENCE

SW 5 State Highway No. 5

NOTES :-

heights are in metres and above Indian mean sea level. Contours are approximate.

A relative height (e.g.,) represents the approximate height, in metres, between the top and bottom of a steep slope.

The triangulated heights and contours in this sheet are not based upon the heights of the spirit-levelled benchmarks and may not be strictly in accordance with them.

Contours and unenclosed roads in the sheet appear when there is an adequate reason for generally applying to dry seasons. Certain features generally shown are cart-roads and field roads.

The numerous close numbers along roads and railways are shown in short type, e.g., " where distances are shown in capital type, e.g., "1000".

Towns, shown in this sheet usually contain water from July to January.

Perennial collection stations in the non-perennial rivers are shown with a dot during summer.

Great distances are shown in miles and every 500 scale is shown.

Permanence to use much along side is required below the irrigation stations.

A. Surveyed during 1988-89. Updated for major details during 2003-04.

Projection - UTM Datum - WGS 84

Magnetic Variation from True North about $\frac{1}{2}^{\circ}$ West in 2005.
(Decreasing by about 1 annually).

REFERENCE

Intake was low

The triangulated heights and contours in this sheet have not been adjusted to the heights of the spirit-levelled bench marks and may not be strictly in accordance with them.

Cart-tracks and unimproved roads in this sheet against which there is no descriptive remark are generally passable in dry seasons.

Periodical outcrops occur in the non-forested portion of Hsiao Hsien bed during summer.

Tanks, shown dry, in this area usually contain water from July to February.

Cactus hedges generally exist along cart-tracks and field bounds.
