

JUSTIFICATION FOR SELECTION OF THE SITE

Two important reasons have promoted for considering the Hillock.

(1) The selected ridges are rocky in nature with vertical stratification. Barren, unfit for any growth of plants or trees, about 150-200mts. Height from the Ground level, filled with huge Rocks, and virtually goes waste if not used for constructional purposes like wind power projects.

(2) Fortunately Karnataka has been gifted by the Nature with some of the very good wind sites in the country with Chitradurga range standing in the forefront. Exploring the possibilities of Potential wind sites in India are the "Indian Institute of Tropical Meteorology", Bangalore, who have installed a wind mast for studying the wind pattern in this area. This has yielded exemplary results with consistent wind speeds all along declaring Chitradurga as one of the feasible wind sites in the state of Karnataka.

In 15 years the project provides various benefits to society by providing green energy. In future also it will be beneficial for society and environment.
