NOTES ➤

Shallow slopes along canals or drains are 1,000 feet apart and every existing fifth stone is shown along Batavia's branch (SHIMSHI CANAL) and Paksodud. Distributaries also are 5,000 feet apart every existing one is shown.

In season to use cart-roads and unimproved rural roads is required from the irrigation authorities if it shows dry, in this area usually comes water from July to December.

The rivers are numerous throughout the country, but the most important ones have been shown; they are:

- (A) The Ganges, B. represents the approximate right, in meters, between the top and bottom of a slope
- (C) The Indus, D. represents the approximate right, in meters, between the top and bottom of a slope

The rest of the wells, in this area are generally divided into two groups, those which are irrigated by administrative boundaries and norms have been shown, those which are not irrigated by administrative boundaries are not shown.

The maps are brought up-to-date to 2006 and unimproved roads, bridges, etc., are shown.
