

CONSTRUCTION/IMPROVEMENT OF HUNLI-METENGLIANG-HAYULIANG (H-M-H) ROAD FROM KM 158.000 TO M 165.000 TO NHDL SPECIFICATION UNDER 116 RCC/ 48 BRTF/PROJECT UDAYAK IN THE STATE OF ARUNACHAL PRADESH

1. To meet the basis requirements of defence forces, axis along the Duibang river and lohit river, have been developed by constructing all weather roads. But there is no lateral connectivity between these two important axis i.e Hunli and Hayuliang. Both these obligatory points are on different axis and connected with main land with existing CI-9 road.

2. Accordingly, a need was felt to construct a lateral connectivity road for construction of road Hunli-Metengliang-Hayuliang having approximate length of 175 km to NHDL specifications.
