

Justification for locating the project in forest land

At the time of survey of the road Tartik to talli toli our agency keep this point in mind that the deforestation must be minimum .Some maps and document prove that our road alignment is not passing through any reserve& dense forest . Oak trees and other important vegetation falling in the alignment also minimum so our demand of forest land for this project is legal .If we choose other alignment , than we will go in reserve forest and this will also not economic engineering point of view.
