

SITE INSPECTION REPORT OF KAZHUTHURUTI BRIDGE

As per the proposal number FP/KL/ROAD/21739/2016 for the reconstruction of Kazhuthuruti Bridge at kilometer 69/950, the site for new proposed bridge is inspected by me on 09.11.2016 near kahuthuruti old bridge in Aryankavu Range along NH 744 Kollam – Thirumangalam highway. The proposed bridge is 22m length and 10m in width. A total extent of 0.018 ha of forest land including bridge area and approach road is needed for this project. And no trees have to be removed for the construction. The old Bridge is narrow and damaged due to the regular usage and oldness and also this bridge is to be constructed on NH 744 Kollam – Thirumangalam interstate national highway and is used by many people including visitors of Palaruvi ecotourism centre and Sabarimala Pilgrims. So the widening of existing bridge is essential for smooth vehicle traffic.
