

SITE INSPECTION REPORT

Inspected the site on 24-03-2017. The proposal is for laying 40 m LT single phase 2 wire line and provide service connection to Sri. Ravindran Kani under **Total electrification Scheme**. The forest area is situated on the fringe of Thannimood settlement and therefore the project will cause no harm to the forest flora and fauna. It is found that the area to be diverted for providing electric line is **0.008 ha**. No trees are to be felled for drawing electric line at a width of 2 m through the forest area. The area does not have rare / endangered / threatened species and is not part of protected area under Wildlife (Protection) Act 1972. No protected archaeological / heritage site / defence establishment is located in the area. The requirement of forest land as proposed by the user agency is unavoidable and bare minimum. During my inspection, no work in violation of the FC Act or guidelines is seen carried out by user agency. The project is recommended for approval.
