

SITE INSPECTION REPORT

Inspected the site on 24/03/2017. The proposal is for laying 1000 m LT single phase UG cable for electrification of Mottalmoodu colony under **Total electrification Scheme**. The area to be diverted for providing electric line is 0.035 ha as per the proposal but the actual area of forest land to be diverted will be 0.065 ha. No trees are to be felled for laying single phase underground cable through the forest area. No harm to forest, flora and fauna will be caused by the project. The area does not have rare / endangered / threatened species and is not part of protected area under Wildlife (Protection) Act 1972. No protected archaeological / heritage site / defence establishment is located in the area. The requirement of forest land as proposed by the user agency is unavoidable and bare minimum. During my inspection, no work in violation of the FC Act or guidelines is seen carried out by user agency. The project is recommended for approval.
