

Inspection Note
Inspected on 26-6-2017 .

Following observations are noted: The proposed line will be drawn through the RDF II(VFC-168/1) Forest area which falls under Akathethara Section, Walayar Range. It is found that only drawal of 66.8 metre PVC insulated twincore WP wire line across the forest area with 1 PSC pole (7m) execution inside forest area is required. The total land utilisation will be only $66.8 \text{ m} \times 0.1 \text{ m} = 6.68 \text{ m}^2$. A walkway exists through this area used by the applicant for going to his house. No felling of trees is needed for this purpose and only cutting of small branches will be sufficient and also the line after construction will not create any disturbance to wild animals or birds in the locality.

Chief Conservator of Forests,
Eastern Circle, Palakkad.
