SELF EMPLOYED

NOTES:

Thoughts and Comments have been given above.

A relative insight (e.g., 28) represents the maximum insight = correct, minimum the day after tomorrow of a relative insight.

Positive, otherwise, in this view possibly cannot occur from July to November.

Confidence is generally and dependent on several.

The group error level of 4 is present and relative to the level and included in any way that it is a part of the relative (relative).

International Security and Control of the following view on International Security and Control.

COMPARATIVE MODEL

Figure 1 | Schematic diagram of the experimental setup. The subject is seated in a chair, viewing a screen displaying a target (a small black dot) and a starting point (a small white dot). The subject's hand is positioned at the starting point, and the distance between the hand and the target is indicated by a horizontal line. The subject is instructed to move the hand towards the target, and the time taken for the hand to reach the target is recorded. The distance between the hand and the target is also recorded. The subject is then instructed to move the hand back to the starting point, and the time taken for the hand to return to the starting point is recorded. The distance between the hand and the starting point is also recorded.

Projection - UTM Datum - WGS 84
Magnetic Variation from True North about 3° in 2005.
assumed to about 1.5° in 2010.

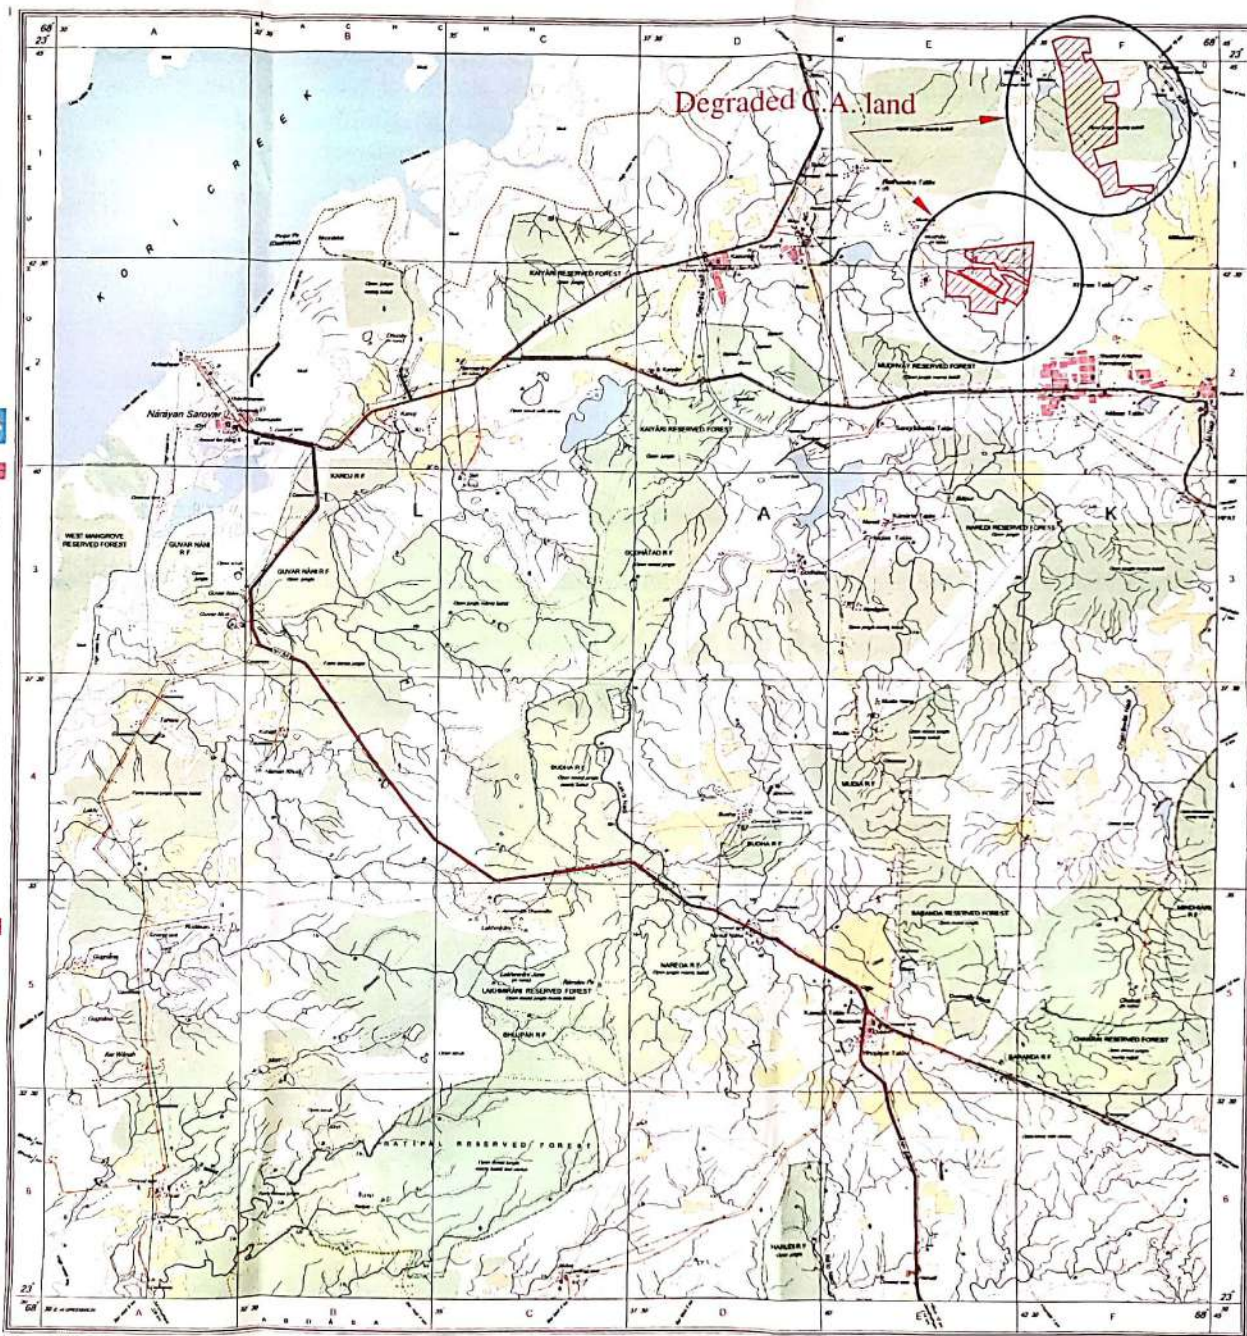

Scale in 1:50,000

0 1 2 3 Kilometers
