70-100. *Am. J. Pathol.* 46: 179

٢٤٤

1. The first step is to identify the problem. This can be done by asking the following questions: What is the problem? What are the symptoms? What are the causes? What are the consequences?

2. The second step is to analyze the problem. This can be done by asking the following questions: What are the underlying causes? What are the contributing factors? What are the potential solutions?

3. The third step is to develop a plan. This can be done by asking the following questions: What are the goals? What are the objectives? What are the steps? What are the resources?

4. The fourth step is to implement the plan. This can be done by asking the following questions: What are the actions? What are the responsibilities? What are the timelines?

5. The fifth step is to evaluate the results. This can be done by asking the following questions: What are the outcomes? What are the impacts? What are the lessons learned?

COMPLATION INDEX

As a result, the model is able to capture the underlying structure of the data, and the results are more reliable and accurate.
