## REFERENCE

SH 65 State Highway No. 65.

**NOTES :-**

NOTES :-

1. Heights are in metres and above Indian mean sea level.  
Contours are approximately 10 m.

2. A relative height,  $H_r$ , represents the approximate height in metres, between the top and bottom of a steep slope.

3. Tanks, shown dry in this case, usually contain water from July to December.

4. Tuberules are numerous throughout the sheet, only the important ones have been shown.  
Unbranched roots and cat-tails are the most common *Sagittaria* in this system. Perennation to the roots and cat-tails along canals is required from the infertile soil-water.

5. The district boundary in the Ganges River follows the main dune water channel and will change with the fluctuation of that channel.

6. The kilometre scale markers along roads, railways and canals are shown in short type, e.g. 2 where the infertile marshes are not suitable for agriculture.
