CONVENTIONAL SYMBOLS

[illegible]

NOTES :-

Heights are in metres and above braille rows are level.
 Contours are approximations.
 A relative height, *h_r*, represents the approximate height, in metres between the top and bottom of a step slope.
 Tardis, shown *o/s*, is this area, usually centred water from July to March.
 All top contours and unmarked roads to the north are generally mountain or dry stream. Permission has been given to change a road (usually from the original asphalt).
 Wells & tube-wells are numerous throughout the area; only the important ones have been shown.
 The area adjoining the Ganga River is liable to change owing to continual fluctuation in the course of the river.
 The critical boundary below it follows the main deep water channel in the Ganga River, will change with the fluctuation of that channel.
 The kilometre scale numbers along roads, railways and canals are shown in stem type, e.g. *g.1*, where kilometre numbers are shown in script type, e.g. *g.1*.

REFERENCE

MH 28 National Highway No. 25.

TES .

Height h is measured above the Indian ground level.

Curvature is negligible.

A relative height, h_r , represents the approximate height, in metres, between the top and bottom of a steep slope.

The kilometre scale numbers along roads are *not* railways are shown in stant type, e.g. 18 whereas milestone numbers are shown in upright type, e.g. 25.

Landmarks and terrain features in the sheet are not usually measurable in dry season. Permission to most strong camps is required from the military authorities.

Wells are numerous throughout the sheet; only the important ones have been shown.

Tanks, situated very close to roads, usually contain water from July to March.

A relative height, e.g. 100 metres above sea level, indicates the height of the top of the cone of emission above the present contour.

The sheet has been prepared from 1:25,000 maps.

Areas with few settlements due to layers of coarse sand are shown as 'barren land'.
