

The multi village water supply project for Dimoria block is designed to cater to 12 Gram Panchayats within Dimoria Block. The water supply areas are located at different levels. Hence the area selected for construction of the water treatment is found to be technically feasible to supply water to all the 12 gram panchayats through gravity without pumping. No other suitable land was found to construct the water treatment plan which was technically viable keeping in view the various dimensions of the projects including the intake location. However the land was also found to be adequate to construct the Water treatment plant.
