

Justification Report

The Government of Kerala and Kerala State Electricity Board Limited is committed to achieve 100% electrification of all house holds in Kerala by March 2017. Special attention will be given to those who are financially and socially backward. The Government has decided to extend power line in places where the beneficiaries are incapable of finding the expences for power connection. About 2.5 lakhs houses will get benefit under the programme. The funds for the programme will be obtained from various sources under Central & State schemes.

There are about 12 families residing in Choorupara area. The houses of these families are not yet electrified since there are no electric lines nearby. To provide electricity to them KSEB Ltd has to draw about 350 meter of LT overhead line. Out of this, two segments of line have to cross the forest land. The two segments are about 310 m & 40 m in length. If permission is granted to draw these lines the above mentioned 12 families can get electricity to their houses. Hence this project is proposed.
