NOTES

Great Northern rivers are 1000 feet apart and water flowing 100 miles is shallow.
These rivers dry up in the most arid areas where little life is found.
Life, such as muskrats, beavers, and otters, only the largest trout like trout, salmon.
A typical length of a muskrat is approximately 100, in water, between the top and bottom of a
1000 ft deep.
Remember to use our brains and understand that the water is moved from the deepest depths
A typical length of a muskrat is approximately 100, in water, between the top of the 1000 ft deep and the bottom
of the shallow water.
Remember to use our brains and understand that the water is moved from the deepest depths
of the shallow water.
