

Justification for locating project in forest land

Jaduguda Uranium deposit was explored during 1950s-60's and the ore production was started in 1967. It is one of the oldest and deepest underground uranium mines of Uranium Corporation of India limited. Since from the commissioning date, the mine is producing uranium ore as per the target. The entire ore produced from jaduguda mine is processed in the processing plant located at jaduguda to recover the uranium in the form of yellow cake.

Mining is a site specific activity so it cannot be located in any other area. Operation of Jaduguda Mines has strategic importance for national interest to cater the need of uranium supply in the country for fuelling the nuclear power plants.

For Uranium Corporation of India limited
