

Justification for locating the Project in Forest land

This proposal involves diversion of 11.377 ha of forest land. Three alternatives were aligned in the field. Considering the terrain, quantum of forest land involved, Cost economy of the Project, less number of Angle points to be placed in forest land, avoiding crossing of this transmission line to other infrastructures already constructed, finally the alternative No.1 has been selected as has been shown in the corresponding topo sheet (Plate - 1).
