NOTES :-

Heights are in metres and above Indian mean sea level. Contours are approximate. A relative height, e.g., 50', represents the approximate height, in metres, between the top and bottom of a steep slope. Cart-tracks and unmetalled roads in this sheet are generally metable in dry season. Permission to use these along canals and Parasur Chauraha Branch is required from the irrigation authorities. The area adjoining the Ghaghara River is liable to change owing to continual fluctuation in the course of the river. Wells and tube-wells are numerous throughout the sheet, only the important ones have been shown. The river heights and contours in the sheet have not been adjusted to the heights of the spirit-levelled bench-marks and may not be strictly in accordance with them.
