

JUSTIFICATION FOR LOCATING THE PROJECT IN FOREST AREA

The SHEP has been proposed to generate power from the water discharges of Mandira Reservoir and natural water head available between the reservoir water and its downstream. Generation of electricity from the SHEP will go a long way in harnessing the energy going waste and meeting renewable purchase obligations of RSP. The energy availability will also improve the voltage profile and reliability of the power system in the nearby Grid Substation/Area. Small Hydropower programme being one of the thrust areas of the Government of India, Ministry of new & Renewable Energy provides subsidy for SHEP projects to improve the economic viability. This subsidy also may be availed and utilized towards repayment of the term loan availed from a financial institution. This land is suitable for executing the said work. Therefore it is felt there is immense necessity, need & opportunity to develop the project.
