

JUSTIFICATION

The Devipada habitation of Vansda is an interior area which is surrounded by forest area and across the Dudhani River which does not have all weather road connectivity. The people commute with foot by crossing the river. During the monsoon season the situation worsens when water level is increasing which imposes difficulty in crossing the river and reaching at their home. Being surrounded by forest area there is no alternative except constructing a causeway at proposed location of river lute with huge cross section which comes in forest area.
