

Justification for locating the project in forest area.

NH-31 passes through the forest area of LATAGURI since a long time past. The Railway line crossing the National Highways at Ch. 652.60 km., also runs through the dense forest area. Now the ROB structures must come in lieu of the exiting Level Crossing and the project is proposed to be located as such. There is no option to relocate the project through non-forest area by providing a realigned National Highway at that LC Gate, Which would require more diversion of forest land vis-à-vis due to presence of dense forest in the area.
