#### NOTES :-

Heights and Contours have not been shown.  
A relative height, e.g., 200, represents the approximate height, in metres, between the top and bottom of a steep slope.  
Tanks in this area usually contain water from July to November.  
In areas, where no tube-well exists cultivation is periodic and dependent on rainfall.  
Numerous field bunds of less than 2 metres in height occur throughout the cultivated area.
