

Scale 1:50,000

The image shows a single page from an old, yellowed book. The page is divided into a grid of sections, each labeled with a number in the format 'G-25X'. The sections are arranged in a 3x3 grid, with the bottom-right section missing. The labels are: G-253 (top-left), G-254 (top-middle), G-255 (top-right), G-256 (middle-left), G-257 (center, highlighted with a black border), G-258 (middle-right), G-259 (bottom-left), G-260 (bottom-middle), and G-261 (bottom-right). The page is heavily stained and discolored, with a yellowish-brown hue. The text is printed in a serif font.

Survey of NOAA

CONSTITUTIONAL STUDIES

The following table shows the results of the analysis of variance for the effect of the type of soil on the growth of the plants. The results are presented in the form of a table with the following columns: Source of Variation, Sum of Squares, Degrees of Freedom, Mean Square, and F-value.

Source of Variation	Sum of Squares	Degrees of Freedom	Mean Square	F-value
Between Treatments	10.00	2	5.00	1.67
Within Treatments	18.00	18	1.00	
Total	28.00	20		

The F-value for the between treatments is 1.67, which is less than the critical F-value of 1.99. Therefore, we conclude that there is no significant difference in the growth of the plants between the two types of soil.
