

JUSTIFICATION FOR ALTERNATE ROAD

We have proposed to construct a road in Chhitaparadia Reserve Forest for the purpose of in word and outward of materials to our plant. the proposed alignment falls in Champa Rage, Compartment No RF 42 Range Jangir- Champa .

The Comparison of three proposed alternative routes surveyed by cost & selection of most viable route evolving minimum diversion of Forest Land & technical feasible are as follows

| S No. | Description | Proposed Route | Alternative Proposed - 01 | Alternative Proposed - 02 |
|-------|-----------------------------------|---|---------------------------|---------------------------|
| 1 | Types of Forest & Compartment No. | RF-42 | RF-42 | RF-42 |
| 2 | Length (In Mtr) x Width (In Mtr) | (254.67 x 15) | (326.67 x 15) | (260.00 x 15) |
| 3 | Boundary Area (Hectare) | Use for Road 0.382 + 0.615 Ha. patch will be used for plantation. | 0.490 | 0.390 |
| | | Total 0.997 | | |

Conclusion: -

In reference to above chart we would like to conclude that the proposed road is the shortest, straight with minimum forest loss. in the proposed site we are proposing minimum patch between two blocks and that is 0.615 Ha and this remaining patch will be used by us for the purpose of plantation. In the Proposed alternates 1 & 2, bigger size of patch is left over between a prior approved road for Sbj Project Pvt Ltd.

In the Proposed Road there are no plantation has been done so far & in the other alternates there are plantation done of silk so proposed road will help us to save the plants.

Hence the proposed site is technically best feasible option.

Regards
