NOTES

Heights are in metres and above Indian mean sea level.
Contours are approximate.
A relative height, e.g. 40, represents the approximate height in metres, between the top and bottom of a steep slope.
Towns shown in this area usually contain water from July to January.
Unimproved roads and foot paths in this area are generally not shown in dry season. Permission to use these roads or paths is issued from irrigation authorities.
The kilometers shown along roads, railways and canals are shown in plain type, e.g. 15, whereas the kilometers shown in italics type, e.g. 15, are shown in italics.
The area adjoining the Ganges River is liable to change owing to continual fluctuation in the course of the river.
The triangulated & traverse heights in this sheet have not been subjected to the heights of the spirit-levelled bench-marks and may not be strictly in accordance with them.
The district and sub-district boundaries in the Ganges River follow the main deep water channel and will change with the fluctuation of that channel.

NOTES :-

heights are in melise and above Indian mean sea level.
Contours are approximate.
A relative height, e.g., *z*, represents the approximate height, in metres, between the top and bottom of a slope or step.
Wells and tubelands are numerous throughout the sheet, only the important ones have been shown.
The various above numbers along roads, railways and canals are shown in italic type, e.g., '8' where the number is shown in upright type, e.g., '5'.
Unmarked roads and cart tracks, in this sheet, are generally motorable in dry season. Permission to use those along canals is required from the irrigation authorities.
The triangulated heights and contours in this sheet have not been adjusted to the heights of the spirit-levelled bench-marks and may not be strictly in accordance with them.
Note: shown dry in this area, usually contains water in the dry season.
A relative height, e.g., *z*, based usually on a canal, indicates the height of the top of canal embankment above the adjacent survey.

NOTES :-
Heights are in metres and above Indian mean sea level.
Contours are approximate.
The triangulated and traverse heights and contours in this sheet have not been adjusted to the heights of the spirit-levelled bench-marks, and may not be strictly in accordance with them.
A relative height, i.e., represents the approximate height, in metres, between the top and bottom of a steep slope.
Tanks shown dry, in this area usually contain water from July to December.
The kilometre stone numbers along roads, railways and canals are shown in slant type, e.g., 5/5 whereas milestone numbers are shown in upright type, e.g., 5/5.
Cart-rails and unmetalled roads in this sheet are generally metalled in dry season. Permission to use those along canals is required from the irrigation authorities.
The areas adjoining the Ganga and Yamuna rivers are liable to change owing to continual fluctuations in the course of these rivers.
A relative height, e.g., 6/6, marked along a canal, indicates the height of the top of the canal embankment above the adjacent country.
