JUSTIFICATION FOR LOCATING PROJECT IN FOREST LAND

We are installing wind mast in forest land (hill top) in forest range Sironj, Vidisha Forest Division for monitoring the wind speed on day to-day basis for assessing the wind potential to develop wind power project.

The proposed wind mast locations are approximately 20 kms to the south east of Sironj City.

The proposed wind mast locations are situated on an elevated hill top ridge on forestland. The proposed site has an elevation in range 510 mtr to 520 mtr a.s.l. The surrounding plain area on non-forest land has an elevation of 460 mt. So the difference elevation of this region is 60 mtr to 80 mtr. The main wind flow is mostly from west and south west direction in this particular region.

This differential elevation of the ridge will result in a reasonably good wind potential at this particular location.
