HEIGHTS & CONTOURS IN METRES

CONTOUR INTERVAL 20 METRES

Water features are shown in blue where they generally contain water.

Cultivated areas are coloured yellow. The exterior boundaries of areas of Reserved or Protected Forests are shown by green ribands.

Contours are approximately a relative height, by , represents the approximate height, in metres, between the top and bottom of a steep slope.

Wooded areas are coloured green. Scattered trees and other vegetation are in green, but prominent surveyed trees are in black.

The triangulated heights and contours in this sheet have not been adjusted to the heights of the spirit-levelled bench-marks and may not be strictly in accordance with them.

The Kilometre stone numbers along roads and railways are shown in slant type, e.g., '5' whereas milestone numbers are shown in upright type, e.g., '5'.

The district boundary between Adilabad and Karimnagar in the centre of God-vari River is conventional and not demarcated. Tanks, shown dry, in this area usually contain water form July to December.

A relative height, e.g., dy , marked along a canal, indicates the height of the top of the canal embankment above the adjacent country. All unmetalled roads are reckonable in dry season.
