JUSTIFICATION FOR FOREST LAND

As sikar city developing as a educational city after kota it started providing a platform for the new industries in the city. Developing of the city needs wide facilities for smooth running of business activity . Road network a basic need for transportation and movement of the traffic . As the sikar city is well connected from all dimensions of the city it needs a better transport system .

Jaipur road and sanwali road both are highways and having a heavy load of traffic merges on bajaj circle which creates a traffic jam over the circle. The newly proposed Road will provide a new route to the industrial area traffic as well as to the colonies situated near forest land. As road will be constructed on the boundary of forest it will also create a blockage to the trespasser and encroachment in the forest area.

Total area in which road construction planned is 4.20 hact. along the road side cycle track and footpath will be constructed and provision for green belt is also considered in the plan.
