

D) JUSTIFICATION FOR LOCATING THE PROJECT IN FOREST AREA

Providing Underground Sewerage scheme to Theni-Allinagaram Municipality with an estimate cost of Rs.42.09 Crores. The approval has been accorded in the G.O.(D) No.132/dt.28.2.2011.

The reason for selecting this route :In the collection system, the streets are sloped from west to east in forest road naturally. The sewerage collected from the houses located in the above streets and by the side of valkaradu (classified as Forest)has to be conveyed through the boundary of Valkaradu. which is used as path way by the public and there is no vegetation. Otherwise the pipe has to be laid against the natural slope which involve deeper cutting to a depth of 5.00m in narrow street and also water mains are passing through this street and the possibility of contamination of water during maintenance in future. Whereas in the forest area the depth is average shallow depth of 2m. So that the proposal is proposed in the boundary of forest area.
