

Note for Justification

As per preliminary survey, there was scope for only 49 No. Towers for the construction of 132 KV D/C Ramban-Sangaldan tr. Line to provide power supply to ISS of Railways at Sangaldan, but during the final and check survey, it was necessitated to insert these towers in the alignment to achieve the mandatory Ground Clearance as per J&K electricity and Indian Electricity act . Since the existing alignment was already approved from the forest area, thus the insertion of these towers automatically falls in Forest area and thus it can't be avoided. Therefore the requirement of forest land for the erection of additional towers for laying of tr. Line as per J&K Electricity and Indian Electricity Standards for work of National Importance (associated with USBRL project) is inevitable.
