NOTES :-

Heights are in metres above Indian mean sea level.
Contours are approximate.

A relative height, e.g., -3r, represents the approximate height, in metres, between the top and bottom of a steep slope.

The triangulated heights and contours in this sheet, have not been adjusted to the heights of the spirit-levelled bench-marks and may not be strictly in accordance with them.

A relative height, e.g., -4r, marked along a canal, indicates the height of the top of the canal embankment above the adjacent level.

Tanks shown in this area usually contain water from July to January.

Tube-wells are numerous throughout the sheet, only the important ones have been shown.

Unmetalled roads and cart-racks in this sheet are generally motorable in dry season. Permission to use them is required from the Irrigation authorities.

Canal distance zones are 1,000 feet apart and every existing Mithori stone is shown.
