COST BENEFIT ANALYSIS

The villages of the nearby proposed area of stone quarry namely "TOKRABANDHA HILL STONE QUARRY NO.2" are mostly poor and as there is insufficient land for cultivation, they are mostly dependent on various stone quarries, stone crusher units, brick industries, etc. and also mitigate to other parts of the State/Country seeking works for their livelihood. If this project is allowed will generate rural employment opportunities, thereby raising their socio-economic condition in addition to huge revenue to be earned by the State exchequer.
