CONVENTIONAL SYMBOLS

[illegible]

NOTES :-

Highlights are in red; numbers above indicate mean levels.

Confidence intervals (e.g., ± 1) are shown in parentheses.

A relative height (e.g., ± 1) represents the approximate height, in inches, between the top and bottom of a steep slope.

The difference above numbers at the top, relative and central, are shown in blue type. e.g., $+1$ = one standard deviation above the mean (roughly 10% of the population).

Wells and low wells are numbers throughout the chart; they also indicate how many observations have been observed.

A relative height, e.g., ± 1 , marked at the top, indicates the height of the top of the canal section above the adjacent country.

Canal sections and wells are shown in the chart as generally measurable in dry season. Permission to use the chart is granted in writing from the Director of the National Institute of Statistics, Hyderabad.

Trains, shown by the line, usually leave from 7:00 a.m. to 10:00 a.m.

Common Observations of Research Projects are not shown above the chart of relative information.

Heights are in metres and above Indian mean sea level.
Contours are approximate.
A relative height, e.g., 50, represents the approximate height, in metres, between the top and bottom of a steep slope.
All Unmetalled roads and cart-tracks in this sheet are generally motorable in dry season. Permission to use the cart-tracks along canals is required from the Irrigation authorities.
The kilometre stone numbers along roads are shown in short type, e.g., 5, 2, whereas milestone numbers are shown in upright type, e.g., 15.
Tanks, shown dry in this area, usually contain water from July to January.
The common boundaries between Reserved Forests have not been shown for want of reliable information.
