

## Justification of the Project

Satna Bansagar Multi Village Rural Water Supply Scheme is going to provide drinking water via tap connection at door step of each house hold for 15 lacs populations in 1019 villages of 5 blocks in satna district. These 5 blocks- Maihar, Unchera, Amarpatan, Ramnagar, & Rampur Bhaghelan are the project area and blocks' periphery are project periphery.

The project is based on surface source of water, raw water is going to be lifted from Markanday Ghat of Sone River and treated nearby Sukhwari village. After treatment, the clear water is to be provided to 1019 villages by constructing 309 Water Storage Reservoir (OHSR/MBR/SUMP) and laying water pipelines of 7500 kms.

As per technical parameters and topographical conditions of site, setting up INTAKE WELL is decided on the basis of nearest location available on the bank of Bansagar Dam. We have done the survey and find that there is no alternate area available to construct intake well.

Since Intake well is being a huge civil structure, it is clear that heavy equipments and transport vehicles will be engaged to construct the same. During the survey it is found that there is no alternate route is available and it is kindly requested to give the permission for construction of approach road to reach and construct INTAKE WELL.
