

Cost-Benefit Analysis

Parameters for Evaluation of Loss of Forests

<u>Sl.No</u>	<u>Parameters</u>	<u>Transmission Lines</u>
01.	Loss of value of timber, fuel wood and minor forest produce on an annual basis, including loss of man-hours per annum of people who derived livelihood and wages from the harvest of these commodities	Negligible as the nature of proposal involves only transmission line. However it is assessed that loss of timber comes Rs 0.12 lakhs/annum.
02.	Loss of animal husbandry productivity, including loss of fodder	Negligible
03.	Cost of human resettlement	Not applicable as no human displacement is involved
04.	Loss of public facilities and administrative infrastructure (roads, buildings, schools, dispensaries, electric lines, railways etc.) on forest land, or which would require forest land if these facilities were diverted due to the project	Not applicable as no such public utilities falls on the forest land involved
05.	Environmental Losses: (Soil erosion, effect on hydrological cycle, wildlife habitat, microclimate, upsetting of ecological balance)	Density of forest involved varies from 0.2 to 0.4. Hence considering average density of 0.3 for an forest area of 1.269 hectare, environmental loss is assessed to Rs. 48.24 Lakh @ Rs.38.022 lakhs /hectare

Cost-Benefit Analysis

Annexure-III

Parameters for Evaluation of Benefit, notwithstanding Loss of Forests

<u>Sl.No</u>	<u>Parameters</u>	<u>Transmission Lines</u>
01.	Increase in productivity attributable to the specific project	considering average flow of power through the line at 30 MW, Load Factor-50%, Loss-2%, average cost of power at Rs.4.93 Kwh, Energy sent out/year = $97 \times 1000 \times 0.5 \times 8760 \times 0.98$ Kwh = = 128772.00x 1000 Kwh Value added = $416362.8 \times 1000 \times 4.93$ =Rs.63.48 Crore /Year
02.	Benefits to economy	The transmission scheme is for evacuation of hydro-electric power generated from HEPs with addition of cheap hydro-electric power, not only power system becomes more stable, but also saves other fossil fuel whose deposits are increasingly diminishing. With commissioning of the scheme, the state of Sikkim also will earn considerable revenue from royalty besides a boost in industries and agricultures and relief to domestic consumers.
03.	No. of population benefited	Whole population of Sikkim in general and the country at large
04.	Employment potential	Transmission line costs approx.16.58 crores. Approximately 20% will be labour component and Percentage of various categories of labourers, their daily wages shall be as under:- i) Skilled- 20% @ Rs.347/day ii) Semiskilled-30% @ Rs.288/day iii) Unskilled-50% @ Rs. 246/day

The following employment opportunities are generated:-

- i) Skilled labourers - 19,112 mandays
- ii) Semiskilled labourers- 43,613 mandays
- iii) Unskilled labourers - 67,398 mandays)

05. Cost of rehabilitating the displaced persons as different from Compensatory amounts given for displacement

Nil, as no person is being displaced due to the transmission line project

06. Cost of supply of free fuel wood to workers residing in or near Forest area during the period of construction

Nil, as during construction period workers shall be provided with Kerosene/LPG
