Proposed OFC

REFERENCE

National Highway No. 56

NOTES :-

heights are in metres and above/below mean sea level.
Contours are approximate.
A relative height, e.g. *seawards* the approximate 'x m', in metres, between the top and bottom of a slope or step.
A relative height, e.g. *the mountain* above *the valley*, railways and canals are shown in start type, e.g. *the 19th* where selection numbers are shown in upright type, e.g. *19th*.
Cross tracks and unmetalled roads: in this sheet are generally not visible in dry season. *Travellers* to use these roads or canals are required from the Irigation and/or local.
Roads are numerous throughout the sheet, only the important ones have been shown.
The *main* river in this series is usually contained within *the* *main* *river* to the *main* *river*.
A relative height, e.g. *seawards* above a canal. Ind. indicates the height of the top of the wall or embankment above the adjacent country.
Hottel and rivers in this sheet are generally formed from October to June at the places indicated as such.
The boundary of the *British* *Indian* *area* is *not* shown for want of reliable information.

ANS :-

Heights are in metres and above sea level unless so stated.
 Contours are approximate.
 1:5000 scale stone markers along the roads, railways and canals are shown in solid type, e.g., '15' whereas milestone numbers are shown in italic type, e.g., '5'.
 Trenches shown dry. In this area usually carries water from July to March.
 Walls are numerous throughout the sheet, only the immediate ones have been shown.
 Unimproved roads and cart-tracks along canals are generally motorable. I intend on to use those as required from the linguistic authorities.
 This sheet has been compiled from 1:25,000 survey.

NOTES :-

Heights are in metres and above Indian mean sea level.
Contours are approximate.
A reactive habit, dr, represents the approximate height, in metres, between the top and bottom of a steep slope.
The vitellina stone numbers along roads and railways and canals are shown in short type, e.g., 5' whereas the vitellina numbers are shown in short type, e.g., 5'.
Cart tracks and unmetalled roads in this sheet are generally metalled in dry season. Permission to use these roads is required from the adjacent authorities.
Tanks, shown in this sheet, usually contain water from July to March.
A relative height, e.g., dr, marked along a canal, indicates the height of the top of the canal embankment above the adjacent country.
Wells and tube-wells are numerous throughout the sheet; only the important ones have been shown.

Proposed OFC

REFERENCE
 NY 24 National Highway No. 24

Heights are in metres and above Indian mean sea level.
Contours are approximate.

A relative height, e.g., h_r , represents the approximate height, in metres, between the top and bottom of a steep slope.

All cart-tracks and unretailed roads in this sheet are generally motorable in dry season. Permission to use those along canals is required from the Irrigation authorities.

The traverse heights and contours in this sheet have not been adjusted to the heights of the spirit-levelled benchmarks and may not be strictly in accordance with them.

The kilometre stone numbers along roads, railways and canals are shown in slant type, e.g., '5' where milestone numbers are shown in upright type, e.g., '5'.

The area adjoining the Ghaghara river and Sarju Nadi are liable to change owing to continual fluctuations in the course of the river.

Tube-wells are numerous throughout the sheet; only the important ones have been shown.

Forest boundaries and their pillars shown in this sheet are of unclassified forests.
Tanks, shown dry in this area, usually contain water from July to December.

COMPILATION INDEX

A The sheet is compiled from 1:25,000 field records surveyed during 1991-92 and updated major details and administrative boundaries

	during 2005-06.
