NOTES -  
Height and contour lines not been shown.  
A relative height, H, represents the approximate height, in metres, between the top and bottom of a steep slope.  
Tanks, when dry, in the area usually receive water from July to December.  
Wells and tube-wells are numerous throughout the sheet, but only the important ones have been shown.  
Unimproved roads in this sheet are generally mettable in dry season.  
The distances shown along roads, tracks and the railway are shown in short type, e.g., 'Y' where distance numbers are shown in upright type, e.g., '12'.  
The area adjoining the Gomti River is liable to change owing to continual fluctuations in the course of the river.
