

SITE INSPECTION REPORT

I have inspected the site proposed to be diverted during last week of Nov'2011. No rare / endangered / unique species of flora and fauna are found in the proposed area and no archeological / heritage site / defence establishment or any other important monument is located in the proposed alignment route.

It is also observed that the requirement of forest land as proposed by the user-agency is unavoidable and the barest minimum for the project and that there is no work carried out in violation of the Forest (Conservation) Act, 1980 by the user-agency.
