No. RK/FCA/Domehar to Navi/ 7436 Himachal Pradesh Forest Department

Dated Shimla-2, the

13-03-2025

From:

DFO (Rural), Shimla

To: The Nodal Officer-cum-Pr. CCF (FCA),

O/o Pr. CCF (HoFF), HP.

Subject:

Diversion of 3.2322 ha of forest land for the construction of link road from Domehar to Navi , Tehsil Suni Distt. Shimla HP in favour of Executive Engineer (Rural) HPPWD Dhami Tehsil and District Shimla, HP under the jurisdiction of Shimla Forest Division, Himachal Pradesh (Online Proposal No. FP/HP/ROAD/25347/2017)

Sir,

May kindly refer to the Integrated Regional Office, Chandigarh, MoEFCC, online letter No. I/95333/2025 dated 29th January, 2025 on the subject cited above.

2. The point wise reply with respect to the observation raised by the Integrated Regional Office, Chandigarh, MoEF&CC vide letter referred to above is given as follows: -

Sl. No.	Observation	Compliance		
1.	In reference to observation No-B (iii), Reply Not Accepted, Revised CA scheme has been submitted with irrigation components which is for Rs. 494497+24725 (contingency charges), however as the DFO Demand draft the amount is Rs 32,14,231+1,60,712 (contingency charges) for CA scheme. State Govt shall submit the correct details with justification, duly authenticated by DFO concerned.	In this regard, it is submitted that Justification CA Bill has been prepared by this office attached as Annexure - I		
2.	In reference to observation No-B (viii), Reply Not Accepted, State Govt shall submit the detailed Soil Moisture conservation plan with details of protection/conservation measures undertaken in the instant proposal, duly authenticated by DFO concerned	In this regard, it is submitted that detailed Soil Moisture conservation plan with details of protection/conservation, has been submitted and duly authenticated by DFO concerned attached as Annexure - II		

This is for favour of kind information and necessary action, please.

(Dhivya N), IFS Divisional Forest Officer (Rural), Forest Division Shimla. Tel.No.- 0177-2623412

E-mail: head-fordiyshi.hp@hp.gov.in/

Full Title of the Project:

Annexure-1

Diversion of 3.2322 ha of Forest land for the construction of link road from Dumehar to Navi, Tehsil – Suni, District – Shimla, IIP, in favour of Executive Engineer, Himachal Pradesh Public Works Department, Shimla Rural Division, Dhami, falls within the jurisdiction of Shimla

(Rural) Forest Division.

Online Proposal No. Proposal Submission Date

FP/HP/Road/25347/2017 25th January, 2020

Justification regarding CA Scheme Bill

It is submitted that Revised CA scheme has been submitted irrigation components, amounting to Rs. 494,497 plus Rs. 24,725 in contingency charges, which is the required amount for 1 hectare of CA land. However, the proposed CA land \$6.50 hectares. Accordingly, the CA amount is calculated as Rs. 494,497 × 6.50 = Rs. 32,14,231, and the contingency charges as Rs. 24,725 × 6.50 = Rs. 1,60,712. Adding all the components of the CA scheme, including the CA amount (Rs. 32,14,231), contingency charges (Rs. 1,60,712), other charges (Rs. 92,500), and departmental charges (Rs. 5,62,491), the total sum amounts to Rs. 40,29,934, as mentioned in the last row of the CA bill. Therefore, the cost calculation and the total sum presented in the submitted CA scheme bill is accurate and justified.

Divisional Forest Officer (Rural), Forest Division, Shimla

HIMCHAL PRADESH FOREST DEPARTMENT

SOIL AND MOISTURE CONSERVATION PLAN

IN LIEU DIVERSION OF 3.2322 HAC OF FOREST LAND IN FAVOUR OF EXECUTIVE ENGINEER (RURAL) HPPWD DIVISION DHAMI SUB- TEHSIL- DHAMI DISTT- SHIMLA HP FOR THE CONSTRUCTION OF LINK ROAD FROM DUMEHAR TO NAVI TEHSIL- SUNI SHIMLA RURAL FOREST DIVISION, DISTRICT SHIMLA HIMACHAL PRADESH.PROPOSAL NO –FP/HP /ROAD /25347/2017

INTRODUCTIOIN TO DIVISION/LOCATION SPECIFIC SMC PLAN:

It is important that a SOIL AND MOISTURE CONSERVATION PLAN should provide site specific prescription for the activities to be undertaken under each heading of the SMC Plan components.

Objective of Study.

The broad objectives for preparation of Soil and Moisture Conservation are outlined as under:

- i) Checking soil erosion and land degradation by taking up adequate and effective soil conservation measures, both engineering as well as biological, in erosion prone areas (mainly under very severe and severe erosion intensity categories)
- ii) Rehabilitation of degraded forest areas through forestation and facilitation natural regeneration.

Analysis of problem: -

Soil Erosion:

-

Lack of vegetal cover is a contributing factor for accelerated soil erosion in the tract as also for environmental degradation. While ideally, dense tree cover or forests would have been the best insurance against soil loss and environmental degradation, the condition in the tract are otherwise, Large areas are either blank or bear thin tree crop. The lower reaches of the tract along the river are generally barren and devoid of any tree growth. The good forests are confined to upper reaches. Thus these natural conditions are a limiting factor in addressing the problem of soil erosion and environmental degradation, the condition in the tract are otherwise. Large areas are either blank or bear thin tree crop. The lower reaches of the tract along the river are

Generally barren and devoid of any tree growth. The good forests are defined to upper reaches. Thus these natural conditions are all limiting factor in addressing the problem of soil erosion and environmental degradation. Nevertheless, remedial measures can be undertaken to minimize their impact to some extent.

Treatment measures: -

SOIL AND MOISTURE CONSERVATION PLAN is the optimal use of Soil and water resources within a given geographical area so as to enable sustainable production. It implies changes in land use, vegetative cover, and other structural and non-structural action that are taken in SMC. The overall objectives of SOIL AND MOISTURE CONSERVATION PLAN are to:

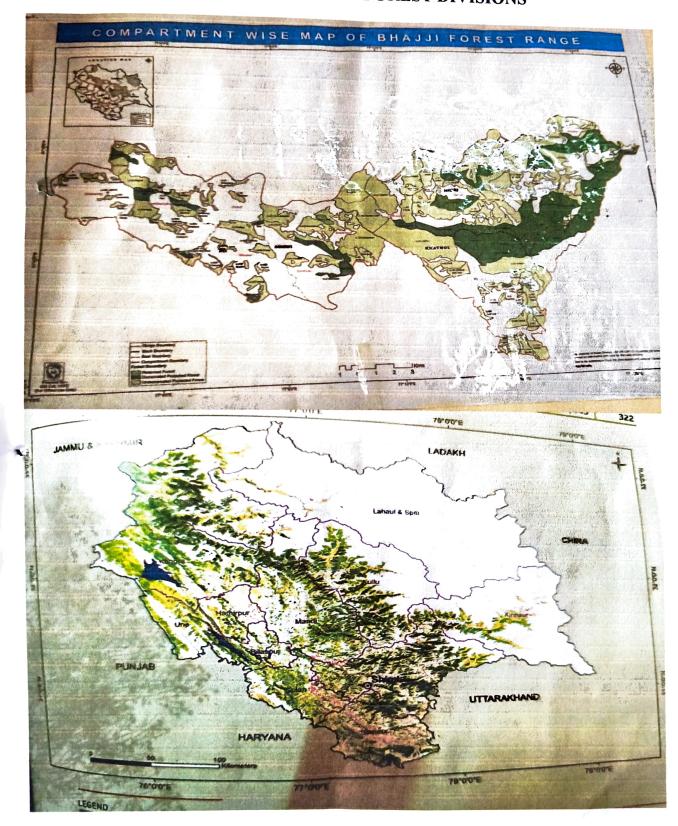

- ➤ Increase infiltration into soil
- ➤ Control excessive runoff
- ➤ Manage & utilize runoff for useful purpose

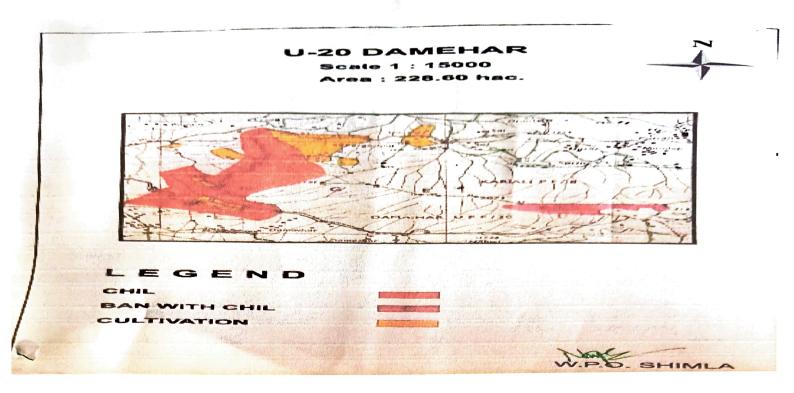

Shrub/bioengineering Plantation: -

Engineering measures:

- i) Moisture Retention measures
- ii)Drainage Line Treatment
- iii) Stabilization of landslide/landslips

SLOPE, ELEVATION, LANDUSE, LANDCOVER AND ASPECTS OF KARSOG, KOTGARH & SHIMLA RURAL FOREST DIVISIONS

Slope

The slope has a great influence on the soil and water loss from the area and thereby influences the land-use capability. The slope determines the erosion susceptibility of the soil depending on its nature. This helps in classifying various lands in suitable capability classes which enables us to formulate suitable conservation measures for the prevention of soil erosion,

Land-use/Land Cover

For the preparation of land use/ land cover classification of the catchment area, forest cover data for the year 2017 has been procured from Forest Survey of India (FSI). FSI has classified the area into five classes viz., very dense forest, moderately dense forest, open forest, scrub land and nonforest. The forest cover is broadly classified in 3 classes, namely very dense forest, moderately dense forest and open forest. The other classes include scrub and non-forest. These classes are defined as below:

Very Dense Forest: All Lands with tree cover of canopy density of 70% and above Moderately Dense Forest: All lands with tree cover of canopy density between 40% and 70% above

Open Forest: All lands with tree cover of canopy density between 10% and 40%

Scrub: All forest lands with poor tree growth mainly of small or stunted trees having canopy density less than 10%

Non Forest: Any area not included in the above classes

All the classes except non forest classified by FSI were used as it is and the non-forest area was further classified into grazing land, agricultural land, settlement, barren land and water body. These classes are defined as below.

Agriculture Land: These are the lands primarily used for farming and for production of food, fiber, and other commercial and horticultural crops.

Settlement: It is an area of human habitation developed due to non-agricultural use and that has a cover of buildings, transport and communication, utilities in association with water, vegetation and vacant lands. It consists of urban as well as rural areas

Grazing: These are the areas of natural grass along with other vegetation, predominantly grass-like plants and non-grass-like herbs (except Lantana species which are to be classified as scrub). It includes natural/semi-natural grass/grazing lands of Alpine/Sub-Alpine and manmade grasslands.

Barren Land: These are rock exposures of varying litho logy often barren and devoid of soil and vegetation cover.

Water body (River): Rivers/streams are natural course of water flowing on the land surface along a definite channel/slope labialization of landslide/landslips
