Whether the area is bearing any root stock of vegetation: The sites selected for Compensatory Afforestation is barren with weeds growth like Lantana, Eupatorium etc. Root stock of principal species like Sal, char, etc is available.

2. Plantation Model:-

Since the area is plain, Block Plantation with 1600 plants per hectare will be raised. Maintenance of plantation for 10 years is also required as per F. No. 11-168/2009-FC dt. 14.12.2012 of MoEF & CC. Considering these facts a site specific cost norm for the plantation is furnished.

3. Schedule of Plantation Programme:-

Detail of year wise break up of requirements of funds is as under:-

4. Technical details:- Technical details of Compensatory Afforestation Scheme are as follows:-

a) General Details:

Survey & Demarcation of boundary:

The identified area will be surveyed by DGPS and the area will be demarcated with RCC pillars of size 2.5 mtr x 30 cm x 30cm. This work will be done by the User Agency at Project cost.

Fencing:

To protect the plantation from grazing and other biotic interference, it will be provided with 7 strand barbed wire fencing with RCC pillars, the cost for which

Scanned with CamScanner

will be paid by the User Agency. The length of barbed wire fence needed in this project is furnished below. The barbed wire fencing will have no impact on the movement of elephant as Injpur Road Range is not elephant movement area.

Sl. No	Village	Length of outer periphery of the site in Mtr.	Length of enclosures if required to be fenced	Length of common fence of adjoining project which need not be fenced	Total length of fence required
1	2	3	4	5	6
1	Pachhikote	2377	2377	0	2377

Estimate for barbed wire fencing has been provided in *Annexure-C*.

Planting and post-planting:

b) Compensatory Afforestation areas of this project is a single plantation for proper management. Block plantation shall be taken up with 1600 plants per hectares at spacing of 2.5 m x 2.5 m. Alignment and pit marking should be done carefully. All post planting measures like casualty replacement, soil working, manuring, fire protection etc. will be undertaken. Cost norm for Block Plantation is furnished as *Annexure-D*.

While taking up plantation, the following vital points shall be taken up for consideration:-

- Care to be taken to raise healthy plantable seedlings of minimum 60 cm height, 10% extra seedlings are to be raised for replacement of casualty.
- Pitting shall invariably be done during November-February i.e. before onset of monsoon. If possible the soil of upper portion and lower portion of pit should be placed separately in specific direction so that while planting the pits will be filled with top-soil first.
- Planting shall be done on the onset of monsoon to get full of monsoon rain and planting should never be delayed.
- Basal dose of 50 grams of NPK and 5 grams of Chlorphyriphos dust per plant should be applied at the time of planting carefully by mixing with top- soil so that the roots of seedlings do not come in direct contact with fertilizer.
- In case of any mortality of planted seedlings, it should be replaced with good seedlings as soon as possible for better success rate.
- Complete weeding in proper time will be done. Strip weeding will not be permitted.

Scanned with CamScanner

- Soil-working and application of 2nd dose fertilizer of 50 gms NPK per plant should be done in time.
- Since the area is provided with barbed wire fence, watch & ward will be easier and the watchers may be engaged in weeding in problematic areas along with watch & ward.

e) Species:

Although indigenous species are to be preferred in the plantation, considering adverse soil & moisture conditions we may go for hardy exotic species where required so that the plants are able to survive. For success of plantation in interior tribal areas, plantation of fruit and NTFP species plays a great role since economic species have a little value for local people. Considering the topography, soil and moisture availability of the plantation area, the following species will be planted.

Name of species	Common Name	Remarks
Azadirachta Indica	Neem	
Derris Indica	Karanja	
Emblica officinalis	Amla	
Terminalia bellirica	Bahada	
Dalbergia Sisoo	Sisoo	
Gmelina auborea	Gambhari	
Dendrocalamus Strictus	Salia Bamboo	
Cassia xiamea	Chakunda	
Tamarindus Indica	Tentuli	
Simaruba Glauca	Simaruba	
Zizyphus Mauritania	Barkoli	
Tectona grandis	Teak	
Mangifera Indica	Mango	

d) Soil and Moisture Conservation Works:-

Since most of the areas are plain and undulating, staggered trench should be constructed. LBCD should be constructed over the nallas to check the soil erosion & better moisture conservation.

e) Protection of the Plantation:- 7 strand Barbed wire fence with RCC pillars all along the periphery of the plantation will be provided. Few watchers will also be engaged for protection of the plantation.

Updation of GST Registration No., HSN code / SAC code in our SAP system
(To be filled by vendor)

As you may be aware a comprehensive indirect tax reform by the name of Goods and Service Tax (GST) is proposed to be introduced in India w.e.f. 01-July-2017 and all Government agencies are working seamlessly to achieve the target date for its implementation. This is a fundamental and the biggest tax reform ever undertaken in the framework of indirect taxes and impacts not only the rates of tax but also various business processes and associated documentation.

GST on the supply of goods and services, applicable right from the manufacturer to the consumer, will replace the existing indirect taxes. An important aspect of transition into the new regime is the heavy emphasis on online matching of credits i.e. matching of supplier and receiver data, the Tax payment and filing of valid returns would be perquisites for availing Input Tax Credit (ITC), thereby making compliance with GST law essential for doing business. In case of non-matching of data there will be huge blockage of working capital at every end. This will require to include the GST Registration Numbers into our system so that the information can be uploaded into the returns to be filed. Understanding of and compliance with GST rules and procedures is a prerequisite for all of us to avail full Input Tax Credit and avoid blockage of working capital.

We request you to kindly provide the GST Registration Numbers and other details in following format:

Vendor	Country(IN)	Region	GST Registration No	GST Classification

#GST Classification
Full GST Registered
Full GST PSU
GST Exempt
GST Compounding

In case you have multiple registration in different states, you may examine the above provision while informing your relevant GST registration Number.

Please also provide HSN Code for materials / SAC code for services (whichever is applicable) as per attached annexure.
We solicit your cooperation in aforesaid matter for timely release of payments as per new GST law.
It is requested to submit GSTN No,on our application on below link.

company in India to transport natural gas on [illegible] company. The company has developed requisite expertise and [illegible]
management competencies.

GAIL has been awarded [illegible] by Ministry of Petroleum and Natural Gas [illegible]

supplement of various customers in the states of Eastern UP, Bihar, Jharkhand, Odisha, [illegible]
Maharashtra & West Bengal.

GAIL (India) Limited (GAIL) has proposed to lay Jagdishpur-Haldia-Bokaro-Dhamra Natural Gas Pipeline (JHBDPL) Project under authorization from Ministry of Petroleum and Natural Gas), Govt. of India. The Jagdishpur-Haldia-Bokaro-Dhamra Pipeline (JHBDPL) Project of GAIL is a part of the Prime Minister Urja Ganga Project. The approximate length of the JHBDPL pipeline is 2660 kms and passes through the various parts of Eastern UP, Bihar, Jharkhand, Odisha & West Bengal.

Similarly, GAIL (India) Limited has been also authorized by Govt. of India vide letter dt.14.03.2016 (Page No.71/800) to lay, build and Operate a cross country Gas pipeline from Phulpur (Uttar Pradesh) to Haldia (West Bengal)/ Dhamra (Odisha) including associated Spur Pipelines. The said pipeline shall be passing through the state of U.P., Bihar, Jharkhand, West Bengal and Odisha for supply and distribution of Natural Gas/ RLNG to various industries and City Gas Distribution networks.

The proposed Phulpur-Haldia/ Dhamra Pipeline along with spurlines will be laid across forest land falling along/ across various utilities such as roads, canals, rivers etc. and pipeline Right of Way (RoU) en-route the pipeline falling under jurisdiction in U.P., Bihar, Jharkhand, West Bengal & Odisha State. The said pipeline shall be laid at the minimum depth of 1.2 mtr., below NLG at utilities crossing points.

The proposed project includes approx. 2660 km of underground natural gas pipeline network with associated facilities such as Sectionalizing Valve (SV)/ Tap off/ metering/ receiving/ dispatch, intermediate pigging/ compressor stations.

As a consequence of rapid rate of industrialization in India, fuel needs are increasing at an equally rapid rate and the supply/demand gap is widening and steps must be taken to address the issue

M/s GAIL (India) Limited envisages to strengthen [illegible] in the country [illegible] of India (Lakshadweep, Andaman & Nicobar Islands) via authorization by MoPNG. GAIL (India) Limited (GAIL), a Public Sector Undertaking (PSU) company is also one of the leading companies in the field of Natural Gas transmission pipeline. GAIL has taken a lead in developing energy transportation infrastructure and connecting major natural gas supply sources and demand markets. GAIL is first company in India to transport natural gas on open access basis and is a pure natural gas transmission company. The company has developed requisite expertise and confidence with proven project management competencies.

GAIL has been awarded authorization by Ministry of Petroleum and Natural Gas to lay a network of gas pipeline and associated facilities for the transportation of natural gas to fulfil the requirement of various consumers in the states of Eastern UP, Bihar, Jharkhand, Odisha (Orissa), Maharashtra & West Bengal.

GAIL (India) Limited (GAIL) has proposed to lay Jagdishpur-Haldia-Bokaro-Dhamra Natural Gas Pipeline (JHBDPL) Project under authorization from MoPNG (Ministry of Petroleum and Natural Gas), Govt. of India. As a consequence of rapid rate of industrialization in India, fuel needs are increasing at an equally rapid rate and the supply-demand gap is widening and steps must be taken to address the issue

Overland transport of fuels by trucks is uneconomical, unsafe and is a contribution to environmental degradation in terms of pollutants released by vehicles in transit and by accidents and spillage.

Pipelines are internationally recognized as the preferred alternative for transport of fuel for safety, economy and environmental friendliness.

Natural gas is used in a variety of applications such as feed stock in fertilizer, petrochemical industry and as fuel in power generation, manufacturing steel, textile, ceramic, glass and other industrial products. As a fuel natural gas competes with alternative products such as coal, lignite and petroleum products such as liquefied petroleum gas, naptha, high speed diesel, light diesel oil and fuel oil. However due to lower fuel operating cost and better combustion characteristics, natural gas has distinct economic advantage over other sources of energy. In addition, natural gas has substantial environmental advantage over other energy sources due to lower emissions.

The Dhamra Angul Pipeline (DAPL) is a part of Jagdishpur-Haldia-Bokaro-Dhamara Pipeline (JHBDPL). The JHBDPL is the part of Pradhan Mantri Urja Ganga Project being executed by GAIL (India) Ltd., a Central Government Maharatna Company for uninterrupted supply of the environment friendly natural gas to various industries, domestic consumption and CNG fuel for vehicle etc. In order to lay the Dhamra-Angul underground pipeline which is a linear project will pass through various villages in eight districts of Odisha involving 12.2282 ha forest land and 1051.8811 ha of non-forest land. Therefore the GAIL (India) Ltd. has applied for diversion of forest land under Section-2 (ii) of Forest (Conservation) Act, 1980.

The Dhamra-Angul Pipeline Project consist of the following pipeline sections:

i. Dhamra-Angul Mainline (RoU width=30 mtr, Dia of Pipe=36")
ii. Paradip Spurline (RoU width=20 mt, Dia of Pipe=18")
iii. Bhubaneswar Spurline (RoU width=20 mt, Dia of Pipe=12")
iv. Cuttack Spurline (RoU width=20 mt, Dia of Pipe=12")

The pipeline will be laid 1.2 mt. below the ground level and shall be restored back to its normal position after laying of pipeline. The RoU width in the forest land is 10 mt. only.

There are 6 (Six) no. of Forest Divisions involved in the project i.e. Bhadrak (WL) Division, Mangrove (WL) Division, Rajnagar, Cuttack Forest Division, City Forest Division Bhubaneswar, Khordha Forest Division and Dhenkanal Forest Division.

There are 8 (Eight) no. of Districts involved in the Dhamra-Angul Pipeline Project. Which are Bhadrak, Jajpur, Kendrapara, Jagatsinghpur, Cuttack, Khordha, Puri and Dhenkanal.

The authenticated land schedule of total forest and non-forest land involved in the project with status as on 25.10.1980 as furnished by concerned Tahasildars are enclosed at Page No.110 to 669/DP.

As reported by DFO, Bhadrak (WL) Division/ Mangrove (WL) Division, Rajnagar/ Cuttack Forest Division/ Dhenkanal Forest Division/ City Forest Division, Bhubaneswar/ Khordha Forest Division, the applied area does not form part of any National Park/ Wildlife Sanctuary/ Biosphere Reserve/ Tiger Reserve/ Elephant Corridor. There is no archaeological monument/ heritage site/ defence establishment located in the applied area. As reported there is no rare/ endangered/ unique species of flora and fauna noticed in the forest area proposed for diversion (Page No.38-40, 41-43, 44-

46, 47-48, 49-51, 52-52A/DP). The estimated cost of the project is Rs.1239.40 Crores (Page No.1/DP). The project will generate regular employment to 20 persons and temporary employment to 1,50,000 persons (Page No.14/DP). There will be no displacement of human habitation due to this project.

2. **Justification for locating the project in forest land:**

The criteria for route selection are

- Optimum distance between source of supply and consumer location (demand points).
- Avoidance of Wildlife Sanctuaries, Reserved Forest, Mining area and Defence establishment to the best possible.
- Avoidance rocky-marshy and low-lying areas
- Safety of people and environment
- Easy access to route during construction and operation.

The route was selected based on least disturbance to environment, forest, human habitation and aquatic bodies. It avoids National Parks and Wildlife Sanctuaries.

The selected route is optimized considering the above factors and connectivity between supply source and consumer location.

The following alternatives as detailed below (shown in Plate No.34) have been examined in detail and the Alternative No.1 is most suitable for forestry point of view and the forest land required for the project in Alternative No.1 is less than Alternative No.2 & 3 (Page No.36-37/DP).

Alternatives Explored for Jagdishpur-Haldia-Bokaro-Dhanbad Pipeline (JHBDPL) Project of GAIL (India) Limited in Odisha State					
Description	Status of land	Length (in mt)	Width (in mt.)	Area (In Sq. mt.)	Area (in ha)
Alternate-1	Forest	1222.82	10	12228.20	12.2282
Total		1222.82		12228.20	12.2282
Alternate-2	Forest	155752.00	10	1557520.00	155.75
Total		155752.00		1557520.00	155.75
Alternate-3	Forest	97647.00	10	976470.00	97.65
Total		97647.00		976470.00	97.65

The other alternatives (Alternative-2 & Alternative-3) are being rejected on grounds of as follows:-

1. Alternative-2 & 3 involves more forest area 155.75 ha and 97.65 ha respectively to be diverted which is more than the Alternative-1.
2. In Alternative-2 the pipeline will be in close proximity to the sensitive sanctuary area. Laying of natural gas pipeline in the sanctuary sensitive area is technically not feasible involving safety of the pipeline.
3. The terrain in Alternative Route-2 and 3 is hilly where laying of pipeline pose several construction challenges.
4. Alternative-2 passes near to the area where most of the lands are non-agricultural land and pipeline cannot be laid in NA lands as per P&MP Act' 1962.

5. Though the overall length (Forest area and Non-forest area) of the pipeline is more in Alternative-2 which increases the project cost.

6. Alternative-3 passes in close proximity to populated areas and most of the lands are also non agricultural land; pipeline cannot be laid in NA lands as per P&MP Act' 1962.

7. Number of railway crossings in Alternative route-3 are more (3 nos.) in comparison to alternative-1 and 2.

8. Number of turning points (TPs) in Alternative-2 and 3 are more that needs bends etc which will add-on to the cost of the project.

Looking into the above, it is imperative for JHDPL natural gas pipeline passing in Odisha in Alternative-1 is more apt technically and safety in comparison to the other two alternatives viz. Alternative-2 and Alternative-3.

Updation of GST Registration No., HSN code / SAC code in our SAP system
(To be filled by vendor)

As you may be aware a comprehensive indirect tax reform by the name of Goods and Service Tax (GST) is proposed to be introduced in India w.e.f. 01-July-2017 and all Government agencies are working seamlessly to achieve the target date for its implementation. This is a fundamental and the biggest tax reform ever undertaken in the framework of indirect taxes and impacts not only the rates of tax but also various business processes and associated documentation.

GST on the supply of goods and services, applicable right from the manufacturer to the consumer, will replace the existing indirect taxes. An important aspect of transition into the new regime is the heavy emphasis on online matching of credits i.e. matching of supplier and receiver data, the Tax payment and filing of valid returns would be perquisites for availing Input Tax Credit (ITC), thereby making compliance with GST law essential for doing business. In case of non-matching of data there will be huge blockage of working capital in every end. This will require to include the GST Registration Numbers into our system so that the information can be uploaded into the returns to be filed. Understanding of and compliance with GST rules and procedures is a prerequisite for all of us to avail full Input Tax Credit and avoid blockage of working capital.

We request you to kindly provide the GST Registration Numbers and other details in following format:

Vendor	Country(IN)	Region	GST Registration No.	GST Classification

=GST Classification
Full GST Registered
Full GST PSU
GST Exempt
GST Compounding

In case you have multiple registration in different states, you may examine the above provision while furnishing your relevant GST registration Number.

Please also provide HSN Code for materials / SAC code for services (whichever is applicable) as per attached annexure.
We solicit your cooperation in aforesaid matter for timely release of payments as per new GST law.
It is requested to submit GSTN No.on our application on below link

The identified area will be surveyed by DGPS and the area will be demarcated with RCC pillars of size 2.5 mtr x 30 cm x 30cm. This work will be done by the User Agency at Project cost.

Fencing:

To protect the plantation from grazing and other biotic interference, it will be provided with 7 strand barbed wire fencing with RCC pillars, the cost for which

Scanned with CamScanner

will be paid by the User Agency. The length of barbed wire fence needed in this project is furnished below. The barbed wire fencing will have no impact on the movement of elephant as Jaipur Road Range is not elephant movement area.

Estimate for barbed wire fencing has been provided in *Annexure-C*.

Planting and post-planting:

b) Compensatory Afforestation areas of this project is a single plantation for proper management. Block plantation shall be taken up with 1600 plants per hectares at spacing of 2.5 m x 2.5 m. Alignment and pit marking should be done carefully. All post planting measures like casualty replacement, soil working, manuring, fire protection etc. will be undertaken. Cost norm for Block Plantation is furnished as *Annexure-D*.

While taking up plantation, the following vital points shall be taken up for consideration:-

- Care to be taken to raise healthy plantable seedlings of minimum 60 cm height. 10% extra seedlings are to be raised for replacement of casualty.
- Pitting shall invariably be done during November-February i.e. before onset of monsoon. If possible the soil of upper portion and lower portion of pit should be placed separately in specific direction so that while planting the pits will be filled with top-soil first.
- Planting shall be done on the onset of monsoon to get full of monsoon rain and planting should never be delayed.
- Basal dose of 50 grams of NPK and 5 grams of Chlorpbyriphos dust per plant should be applied at the time of planting carefully by mixing with top- soil so that the roots of seedlings do not come in direct contact with fertilizer.
- In case of any mortality of planted seedlings, it should be replaced with good seedlings as soon as possible for better success rate.
- Complete weeding in proper time will be done. Strip weeding will not be permitted.

Scanned with CamScanner

- Soil-working and application of 2nd dose fertilizer of 50 gms NPK per plant should be done in time.
- Since the area is provided with barbed wire fence, watch & ward will be easier and the watchers may be engaged in weeding in problematic areas along with watch & ward.

c) Species:

Although indigenous species are to be preferred in the plantation, considering adverse soil & moisture conditions we may go for hardy exotic species where required so that the plants are able to survive. For success of plantation in interior tribal areas, plantation of fruit and NTFP species plays a great role since economic species have a little value for local people. Considering the topography, soil and moisture availability of the plantation area, the following species will be planted.

Name of species	Common Name	Remarks
Azadirachta Indica	Neem	
Derris Indica	Karanja	
Emblica officinalis	Amla	
Terminalia bellirica	Bahada	
Dalbergia Sisoo	Sisoo	
Gmelina auborea	Gambhari	
Dendrocalamus Strictus	Salia Bamboo	
Cassia siamea	Chakunda	
Tamarindus Indica	Tentuli	
Simaruba Glauca	Simaruba	
Zizyphus Mauritania	Barkoli	
Tectona grandis	Teak	
Mangifera Indica	Mango	

d) Soil and Moisture Conservation Works:-

Since most of the areas are plain and undulating, staggered trench should be constructed. LBCD should be constructed over the nallas to check the soil erosion & better moisture conservation.

e) Protection of the Plantation:- 7 strand Barbed wire fence with RCC pillars all along the periphery of the plantation will be provided. Few watchers will also be engaged for protection of the plantation.

Updation of GST Registration No., HSN code / SAC code in our SAP system
(To be filled by vendor)

As you may be aware a comprehensive indirect tax reform by the name of Goods and Service Tax (GST) is proposed to be introduced in India w.e.f. 01-July-2017 and all Government agencies are working seamlessly to achieve the target date for its implementation. This is a fundamental and the biggest tax reform ever undertaken in the framework of indirect taxes and impacts not only the rates of tax but also various business processes and associated documentation.

GST on the supply of goods and services, applicable right from the manufacturer to the consumer, will replace the existing indirect taxes. An important aspect of transition into the new regime is the heavy emphasis on online matching of credits i.e. matching of supplier and receiver data, the Tax payment and filing of valid returns would be perquisites for availing Input Tax Credit (ITC), thereby making compliance with GST law essential for doing business. In case of non-matching of data there will be huge blockage of working capital in every end. This will require to include the GST Registration Numbers into our system so that the information can be uploaded into the returns to be filed. Understanding of and compliance with GST rules and procedures is a prerequisite for all of us to avail full Input Tax Credit and avoid blockage of working capital.

We request you to kindly provide the GST Registration Numbers and other details in following format:

Vendor	Country(IN)	Region	GST Registration No.	GST Classification

=GST Classification
Full GST Registered
Full GST PSU
GST Exempt
GST Compounding

In case you have multiple registration in different states, you may examine the above provision while furnishing your relevant GST registration Number.

Please also provide HSN Code for materials / SAC code for services (whichever is applicable) as per attached annexure.
We solicit your cooperation in aforesaid matter for timely release of payments as per new GST law.
It is requested to submit GSTN No.on our application on below link

DETAILED SCHEME FOR COMPENSATORY AFFORESTATION TO BE CARRIED OUT IN LIEU OF 12.2272 HA. OF FOREST AREA TO BE DIVERTED FOR JAGDISHPUR-HALDIA-BOKARO-DHAMRA PIPELINE (JHBDPL), ODISHA PHASE-I: FOR LAYING OF UNDERGROUND NATURAL GAS PIPELINE ALONG WITH OPTICAL FIBRE CABLE (OFC) FROM JAGDISHPUR IN UTTARPRADESH STATE TO HALDIA IN WEST BENGAL THROUGH BIHAR, JHARKHAND & ODISHA STATE- PIPELINE LAYING THROUGH RESERVED FORESTS / PROTECTED FORESTS / REVENUE FORESTS IN CUTTACK , BHADRAK WL, RAJNAGAR WL, KHURDA, CITY FOREST & DHENKANAL FOREST DIVISION OF ODISHA.

The JHBDPL Project Odisha Phase-I: Diversion of total 12.2272 ha. for laying of underground natural gas pipeline along with optical fibre cable (OFC) from Jagdishpur in Uttarpradesh state to Haldia in West Bengal through Bihar, Jharkhand & Odisha state- pipeline laying through Reserved Forests / Protected Forests / Revenue Forests in Cuttack , Bhadrak WL, Rajnagar WL, Khurda, City Forest & Dhenkanal Forest Division of Odisha.

Hence the requirement of Degraded forest land for Compensatory Afforestation comes to 24.4544 ha. or 25.00 ha for the purpose of diversion of 12.2272 Ha. forest land , has been identified inside Pachhikote DPF, Jajpur Road Range under Cuttack Forest Division. The land is suitable for compensatory afforestation. The Compensatory Afforestation scheme is therefore prepared as per the minimum wage rate of Rs. 298.00 per day as follows:-

The Proposed Compensatory Afforestation area showing on the topo sheet No. 73K/4 is furnished as *Annexure-A*.

GPS co-ordinates of survey stations of Compensatory Afforestation area are furnished as *Annexure-B*.

1. Description of Area

Whether the site selected for Compensatory Afforestation is a land bank or not: This identified area is not from land Bank.

If the CA site is other than the land bank, reasons be given: No land bank has been established yet for this purpose.

Soil Type: Laterite soil

Topography:

Hilly/ Undulating/ Plain: The Compensatory Afforestation site is plain land.

Slope: Steep/ medium/ Gentle: The sites selected for Compensatory Afforestation have medium to gentle slope.

Scanned with CamScanner

Whether the area is bearing any root stock of vegetation: The sites selected for Compensatory Afforestation is barren with weeds growth like Lantana, Eupatorium etc. Root stock of principal species like Sal, char, etc is available.

2. Plantation Model:-

Since the area is plain, Block Plantation with 1600 plants per hectare will be raised. Maintenance of plantation for 10 years is also required as per F. No. 11-168/2009-FC dt. 14.12.2012 of MoEF & CC. Considering these facts a site specific cost norm for the plantation is furnished.

3. Schedule of Plantation Programme:-

Detail of year wise break up of requirements of funds is as under:-

Year	Area in Ha.	Rate/Ha.	Amount
0th Year	25.00	33,839.20	8,45,995.00
1st Year		30,809.80	7,70,245.00

10th Year		5,632.00	1,40,800.00
Total		1,33,322.20	33,33,055.00

4. Technical details:- Technical details of Compensatory Afforestation Scheme are as follows:-

a) General Details:

Survey & Demarcation of boundary:

The identified area will be surveyed by DGPS and the area will be demarcated with RCC pillars of size 2.5 mtr x 30 cm x 30cm. This work will be done by the User Agency at Project cost.

Fencing:

To protect the plantation from grazing and other biotic interference, it will be provided with 7 strand barbed wire fencing with RCC pillars, the cost for which

Scanned with CamScanner

will be paid by the User Agency. The length of barbed wire fence needed in this project is furnished below. The barbed wire fencing will have no impact on the movement of elephant as Jajpur Road Range is not elephant movement area.

Sl. No	Village	Length of outer periphery of the site in Mtr.	Length of enclosures if required to be fenced	Length of common fence of adjoining project which need not be fenced	Total length of fence required
1	2	3	4	5	6
1	Pachhikote	2377	2377	0	2377

Estimate for barbed wire fencing has been provided in *Annexure-C*.

Planting and post-planting:

b) Compensatory Afforestation areas of this project is a single plantation for proper management. Block plantation shall be taken up with 1600 plants per hectares at spacing of 2.5 m x 2.5 m. Alignment and pit marking should be done carefully. All post planting measures like casualty replacement, soil working, manuring, fire protection etc. will be undertaken. Cost norm for Block Plantation is furnished as *Annexure-D*.

While taking up plantation, the following vital points shall be taken up for consideration:-

- Care to be taken to raise healthy plantable seedlings of minimum 60 cm height, 10% extra seedlings are to be raised for replacement of casualty.
- Pitting shall invariably be done during November-February i.e. before onset of monsoon. If possible the soil of upper portion and lower portion of pit should be placed separately in specific direction so that while planting the pits will be filled with top-soil first.
- Planting shall be done on the onset of monsoon to get full of monsoon rain and planting should never be delayed.
- Basal dose of 50 grams of NPK and 5 grams of Chlorphyriphos dust per plant should be applied at the time of planting carefully by mixing with top- soil so that the roots of seedlings do not come in direct contact with fertilizer.
- In case of any mortality of planted seedlings, it should be replaced with good seedlings as soon as possible for better success rate.
- Complete weeding in proper time will be done. Strip weeding will not be permitted.

Scanned with CamScanner

- Soil-working and application of 2nd dose fertilizer of 50 gms NPK per plant should be done in time.
- Since the area is provided with barbed wire fence, watch & ward will be easier and the watchers may be engaged in weeding in problematic areas along with watch & ward.

c) Species:

Although indigenous species are to be preferred in the plantation, considering adverse soil & moisture conditions we may go for hardy exotic species where required so that the plants are able to survive. For success of plantation in interior tribal areas, plantation of fruit and NTFP species plays a great role since economic species have a little value for local people. Considering the topography, soil and moisture availability of the plantation area, the following species will be planted.

Name of species	Common Name	Remarks
Azadirachta Indica	Neem	
Derris Indica	Karanja	
Emblica officinalis	Amla	
Terminalia bellirica	Bahada	
Dalbergia Sisoo	Sisoo	
Gmelina arborea	Gambhari	
Dendrocalamus Strictus	Safia Bamboo	
Cassia siamea	Chakunda	
Tamarindus Indica	Tentuli	
Simaruba Glauca	Simaruba	
Zizyphus Mauritania	Barkoli	
Tectona grandis	Teak	
Mangifera Indica	Mango	

d) Soil and Moisture Conservation Works:-

Since most of the areas are plain and undulating, staggered trench should be constructed. LBCD should be constructed over the nallas to check the soil erosion & better moisture conservation.

e) Protection of the Plantation:- 7 strand Barbed wire fence with RCC pillars all along the periphery of the plantation will be provided. Few watchers will also be engaged for protection of the plantation.
