सं.		
1	As per the submitted Geologist report, the road construction is not be possible in very steep slope area, so the proposal is liable to be rejected, State Government (not below the rank of CCF) shall submit detailed comments in their regard.	CCF Kumaon has informed that as per the Geologist's report, the proposed alignment passes through a steep slope where, if a road is constructed, the generated muck cannot be effectively controlled. A site inspection was conducted by the CCF (Kumaon Zone) on 15.01.2025, along with forest officials and representatives of the PWD. Subsequently, the DFO Civil SoyamAlmora re-inspected the site on 17.04.2025, accompanied by PWD representatives and forest staff. After detailed ground verification, it became amply clear that the selected site/alignment is not suitable for road construction due to the steep gradient, which would also result in ineffective muck disposal. Additionally, the proposed construction would adversely impact 4–5 small naulas (traditional water channels) that feed into a nearby river, thereby affecting both surface and subsurface water flows and water availability. Furthermore, it is important to note that out of the two villages intended to be connected by this road, one village (Tuleri) is already connected through an existing PMGSY road. Upon review of the KML file and ground report, it is strongly recommended that the user agency reconsider the proposed alignment. Since Tuleri village is already connected by a PMGSY road, it would be more feasible to extend this existing road towards the second village (Naini). This alternative would primarily involve nap (private) land, a relatively gentler slope, and minimal tree felling. For reference, a Google Map is attached herewith, which shows an existing trek route along which the

		user agency can propose a new alignment.
2	As per DSS analysis of proposed diversion area KML, the area become 0.06 ha instead of 3.60 ha. A clarification and correct information in this regard in required to be uploaded.	informed by the User Agency that the correct

महोदय,

उपरोक्त संदर्भित पत्र में भारत सरकार द्वारा प्रस्ताव में इंगित कमियां की सुस्पष्ट आख्या बिन्दुवार उपलब्ध कराने हेतु निर्देशित किया गया था। जिसके क्रम में प्रभागीय वनाधिकारी, सिविल एवं सोयम वन प्रभाग अल्मोड़ा द्वारा अपने पत्रांक 3882/12-1 दिनांक 21.04.2025 द्वारा आख्या उपलब्ध करायी गयी है। जो कि बिन्दुवार निम्नवत है:--

1) As per the submitted Geologist report, the road construction is not be possible in very steep slope area, so the proposal is liable to be rejected, State Government (not below the rank of CCF) shall submit detailed comments in their regard.

As per the Geologist's report, the proposed alignment passes through a steep slope where, if a road is constructed, the generated muck cannot be effectively controlled. A site inspection was conducted by the CCF (Kumaon Zone) on 15.01.2025, along with forest officials and representatives of the PWD. Subsequently, the DFO Civil SoyamAlmora reinspected the site on 17.04.2025, accompanied by PWD representatives and forest staff.

After detailed ground verification, it became amply clear that the selected site/alignment is not suitable for road construction due to the steep gradient, which would also result in ineffective muck disposal. Additionally, the proposed construction would adversely impact 4-5 small naulas (traditional water channels) that feed into a nearby river, thereby affecting both surface and sub-surface water flows and water availability.

Furthermore, it is important to note that out of the two villages intended to be connected by this road, one village (Tuleri) is already connected through an existing PMGSY road. Upon review of the KML file and ground report, it is strongly recommended that the user agency reconsider the proposed alignment. Since Tuleri village is already connected by a PMGSY road, it would be more feasible to extend this existing road towards the second village (Naini). This alternative would primarily involve nap (private) land, a relatively gentler slope, and minimal tree felling.

For reference, a Google Map is attached herewith, which shows an existing trek route along which the user agency can propose a new alignment.

2- As per DSS analysis of proposed diversion area KML, the area become 0.06 ha instead of 3.60 ha. A clarification and correct information in this regard in required to be uploaded.

It has been informed by the User Agency that the correct KML file in compliance with point number 2 has been uploaded in section C of Part One of the online portal.

महोदय.

उपरोक्त विषयक एवं संदर्भित ऑनलाईन प्राप्त आपित्तयों के क्रम में सादर अनुरोध है कि प्रस्ताव में बिन्दु सं0 1 से 2 तक लगायी गयी आपित्तयों का प्रस्तावक विभाग द्वारा निराकरण कर प्रतिउत्तर इस कार्यालय को उपलब्ध करायी गयी है। जिसके कम में निम्नानुसार बिन्दुवार प्रतिउत्तर आनलाईन/ऑफलाईन प्रेषित की जा रही है।

Querry

1) As per the submitted Geologist report, the road construction is not be possible in very steep slope area, so the proposal is liable to be rejected. State Government (not below the rank of CCF) shall submit detailed comments in this regards.

Reply

As per **Geologist report**, the proposed alignment is passing through steep slope from which if road will be constructed the generated muck cannot be controlled effectively. In this respect the site was visited by DFO civil Soyam Almora on 17th of April 2025.PWD representative were also present on the site along with forest department field staff.

After ground verification, it was amply clear that the selected site/alignment is not a fit case for road construction because of steep slope. It will also lead to ineffective muck disposal. Furthermore, the proposed construction will badly impact 4-5 small naula which join nearby river, thus affecting the sub surface and surface flow and water availability. Also, of the two villages proposed to be connected by this road, one village (Tuleri) is connected through PMGSY road.

After perusal of KML file and ground report it is suggested that user agency must reconsider the proposed alignment. There is already a PMGSY road connecting the village Tuleri .This road can be extended to the other village(Naini).This will entail mostly gentle slope also entail felling of only few trees . For Reference, the Google map is attached herewith, there is already showing a Foot-track From which new alignment can be proposed by user agency.

2) As (per DSS analysis of proposed diversion area KML, the area becomes 0.06 ha instead of 3.60 ha. A clarification and correct information in this regards is required to be uploaded.

It has been informed by the User Agency that the correct KML file in compliance with point number 2 has been uploaded in section C of Part One of the online portal.

अतः सूचनार्थ महोदय की सेवा में सादर प्रेषित। संलग्न:- यथोपरि।

भवदीय,

प्रभागीय वनाधिकारी सिविल सोयम वन प्रभाग, अल्मोडा।
