2) **BRIEF HISTORY OF THE DISTRICT:**

Chamba district in the state of Himachal Pradesh, in northern India. According to the 2001 Indian census the town is situated on the banks of the Ravi River (a major tributary of the Trans-Himalayan Indus River), at its confluence with the Sal River. Chambial were the Rulers of Chamba State ^[1] Chambials use suffix Varmans.

Though historical records date the history of the Chamba region to the Kolian tribes in the 2nd century BC, the area was formally ruled by the Maru dynasty, starting with the Raju Maru from around 500 AD, ruling from the ancient capital of Bharmour, which is located 75 kilometres (47 mi) from the town of Chamba. In 920, Raja Sahil Varman (or Raja Sahil Verma) shifted the capital of the kingdom to Chamba, following the specific request of his daughter Champavati (Chamba was named after her). From the time of Raju Maru, 67 Rajas of this dynasty have ruled over Chamba until it finally merged with the Indian Union in April 1948.

The district has varying altitude ranging from 609 to 6402 m above mean sea level, with some plain areas touching Pathankot district of Punjab in the south and Kangra district of H.P. in the South. In the East it touches Lahal Spiti district, in North with Jammu and Kashmir. The Ravi is the main river of Chamba district and is the heart and soul of the Chambyals. With its tributaries, it drains the whole of Chamba valley proper between Dhauladhar and Pangi range and thus commands the largest and most important part of the district. The river originates from Bara Bangahal area of Dhauladhar. The Main tributaries of Ravi are Budhil, Tundah, Beljedi, Sal, Siul, Siowa The river Chenab or Chandrabhaga rises from the mountains of Baralacha pass by two heads, the stream with its source on south-eastern side of the pass being called the Chandra and the other one which rises from north-western side is called the Bhaga. After the confluence of these two sister streams at Tandi, the river is generally known as Chenab. There are no large-sized lakes in Chamba district. However, a few water bodies namely Khajjiar Lake. The district with respect to revenue control has been divided into seven Tehsils and three sub-Tehsils. There are 283 Gram Panchayats.

15. Over view of Mining Activity of District Chamba:

Mainly three types of minor mineral constituents such as sand, stone and bajri are required for any type of construction apart from other material like cement and steel. In earlier times, the houses/ buildings were constructed in form of small dwellings with walls made up of mud plaster, stone and interlocking provided with wooden frames and there were negligible commercial as well as developmental activities resulting in less demand of building material. However with the passage of time, new vistas of developmental activities were started. As such the demand of minor minerals in the District started an increasing trend due to construction of Hydro projects. In order to meet the requirement of raw material for construction, the extraction of sand, stone and bajri is being carried

16. Detail of Royalty and Production of Minor Mineral of Chamba District.

Mainly three types of minor mineral constituents such as sand stone and bajri are the main constituents required for the modern construction/developmental activities apart from other material like cement and steel. As such the demand of minor mineral in the District started an increasing trend. In order to meet the requirement of raw material for construction, the extraction of sand, stone and bajri is being carried out exclusively from the river beds. The increase could be gauged from the fact that during 2011-12 the royalty receipt on minor mineral was merely 58,94,528 l which has now been increased to 1,76,07,318 . The royalty received since 2011-12 onwards is tabulated in the following table.

Table -6:

Sr No.	Year	Royalty in laes	Production of mineral (in Metric tonne)
1	2011-12	58.9	294726
2	2012-13	83.9	207834
3	2013-14	91.6	229130
